Immediate Joiner | Open to Relocation

SUMMARY

Site Reliability Engineer with 7+ years of experience designing and operating large-scale, cloud-native distributed systems on AWS and Kubernetes. Proven expertise in building and maintaining highly available (99.9%+) production systems, improving service reliability, observability, and incident response at scale. Strong background in SLO/SLI-driven engineering, on-call incident management, fault diagnosis, and production stability improvements across 24x7 environments. Experienced in leading L2/L3 incident resolution, reducing MTTR, and improving deployment safety using CI/CD and infrastructure automation. Skilled in driving reliability engineering practices, cross-team collaboration, and operational excellence in mission-critical systems.

CORE SKILLS

- Cloud Platforms: AWS (EKS, EC2, IAM, VPC), Azure
- Kubernetes & Containers: Kubernetes (EKS, AKS), Docker, Helm, Production Cluster Management, Autoscaling (HPA), RBAC, Network Policies
- Infrastructure as Code: Terraform
- CI/CD: Jenkins, GitHub Actions, Argo CD
- Automation & Configuration Management: Ansible, Python, Bash
- Observability & SRE: Splunk, Dynatrace, Prometheus, Grafana, CloudWatch, Incident Response (L2/L3), Alert Tuning, SLIs/SLOs, MTTR Reduction
- Linux & Systems: Linux Administration, Shell Scripting
- Security & DevSecOps: IAM, TLS/SSL, SonarQube, Artifactory, Secure Access Control
- Databases: MySQL (Monitoring & Basic Administration)
- Production Operations: Incident Management, Problem Management, Change Management, Root Cause Analysis, Blameless Postmortems
- ServiceNow (SNOW), Remedy, Production Support, Application Support

CERTIFICATIONS

- AWS Solutions Architect Professional (SAP-C02)
- Kubernetes Fundamental Issued by Datadog
- LFS101: Introduction to Linux

WORK EXPERIENCE

System Reliability & DevOps Engineer May 2025 – Dec 2025

Mastercard, Dublin (Contract) – Fulcrum Digital

- Owned reliability of a business-critical global file transfer platform (IBM Sterling) supporting secure financial data exchange
- Maintained 99.9%+ availability of AWS EKS workloads in a distributed production environment
- Led incident response (L2/L3) for Kubernetes, IAM, and network-related failures, reducing MTTR by ~30%
- Improved CI/CD reliability by ~40% through Jenkins and GitHub Actions optimization
- Defined and operationalized SLIs/SLOs for critical services, improving observability and service health tracking
- Built automation using Python and Bash, reducing operational overhead by ~80%
- Led certificate lifecycle management (Venafi) across multi-region environments (EMEA, US, India)
- Enhanced observability using Splunk and Dynatrace, improving RCA speed and incident detection
- Contributed to blameless postmortems and long-term reliability improvements.

Senior Performance and Automation Engineer May 2024 – Nov 2024

Fidelity Investments, Dublin (Contract) - Sirius Technology

- Managed large-scale Kubernetes (EKS) workloads including deployments, scaling, RBAC, and network policies
- Implemented SLI/SLO-based observability strategy using Datadog, Prometheus, and Grafana, improving detection by ~45%
- Built Terraform-based infrastructure for scalable performance testing environments on AWS

- Developed CI/CD performance pipelines using Jenkins and JMeter for load and stress testing
- Led incident response for performance degradation and system reliability issues (L2/L3)
- Improved deployment safety and system stability under peak load through cross-team collaboration
- conditions.

Senior Cloud Engineer

April 2021- June 2022

Future Focus Infotech, India

- Supported migration of applications to AWS EKS, improving deployment scalability, availability, and platform standardization.
- Owned CI/CD pipelines using Jenkins, optimizing build failures and deployment workflows, improving success rate by ~30%.
- Managed Kubernetes (EKS) clusters, implementing RBAC, ingress, and autoscaling (HPA) to ensure secure and scalable deployments.
- Implemented monitoring and alerting using Prometheus and Grafana, reducing downtime and improving system observability.

Senior Cloud Engineer

May 2020- Jan 2021

Softline Services, Project- Vodafone

- Provided L2/L3 production support for AWS EC2-based Linux environments, improving incident response efficiency by ~35%.
- Managed IAM roles and access controls, enforcing least-privilege principles and strengthening cloud security posture.
- Supported Git repository administration and access governance for CI/CD workflows.
- Developed and maintained operational runbooks and documentation, improving onboarding and incident resolution efficiency.

Senior Cloud Engineer

Oct 2016- May 2020

HCL Technologies, India, Project - Rogers, Canada

- Owned high-priority AWS production incidents, ensuring resolution within SLA using ITIL-based incident management practices.
- Supported large-scale AWS migrations, optimizing EC2, RDS, VPC, and S3 for performance, scalability, and cost efficiency.
- Implemented monitoring solutions using CloudWatch, Prometheus, and Grafana, reducing reactive incidents by ~35%.
- Configured VPNs, firewall rules, and network segmentation, strengthening cloud security and network isolation.

EDUCATION

Masters in Cloud Computing

National College of Ireland, Dublin - Sep 2022 – Oct 2023

Relevant Modules: Cloud Platform Programming, Cloud Architecture, Cloud DevOps,
Blockchain

Bachelor's in engineering

BKIT, India - Aug 2012 – Jul 2016

KEY PROJECTS

- Built a Kubernetes-based CI/CD platform using Terraform, Jenkins, and Helm.
https://github.com/nitukumarii/Terraform_EKS_Jenkns
- Created S3 bucket, with full ownership and made it public accessible and created a static website hosted on s3
<https://github.com/nitukumarii/terraform-s3-website>
