SUMMARY

Site Reliability Engineer with 7+ years of experience supporting enterprise-scale, cloud-native and hybrid infrastructure environments across AWS and Kubernetes. Experienced in delivering high availability, reliability, and automation for mission-critical production systems in 24x7 operations. Strong background in incident management (L2/L3), Linux/Unix troubleshooting, monitoring and automation, and CI/CD pipeline engineering. Proven ability to improve system stability through observability platforms, automation frameworks, and root cause analysis, reducing MTTR and improving operational efficiency. Experienced working in cross-functional, distributed teams across global environments, supporting production stability under strict SLA requirements.

CORE SKILLS

- Cloud Platforms: AWS (EKS, EC2, IAM, VPC), Azure
- Kubernetes & Containers: Kubernetes (EKS, AKS), Docker, Helm, Production Cluster Management, Autoscaling (HPA), RBAC, Network Policies
- Infrastructure as Code: Terraform
- CI/CD: Jenkins, GitHub Actions, Argo CD
- Automation & Configuration Management: Ansible, Python, Bash
- Observability & SRE: Splunk, Dynatrace, Prometheus, Grafana, CloudWatch, Incident Response (L2/L3), Alert Tuning, SLIs/SLOs, MTTR Reduction
- Linux & Systems: Linux Administration, Shell Scripting
- Security & DevSecOps: IAM, TLS/SSL, SonarQube, Artifactory, Secure Access Control
- Databases: MySQL (Monitoring & Basic Administration)
- Production Operations: Incident Management, Problem Management, Change Management, Root Cause Analysis, Blameless Postmortems
- ServiceNow (SNOW), Remedy, Production Support, Application Support

CERTIFICATIONS

- AWS Solutions Architect Professional (SAP-C02)
- Kubernetes Fundamental Issued by Datadog
- LFS101: Introduction to Linux

WORK EXPERIENCE

System Reliability & DevOps Engineer May 2025 – Dec 2025

Mastercard, Dublin (Contract) – Fulcrum Digital

- Owned reliability of a mission-critical IBM Sterling file transfer platform enabling secure global financial data exchange
- Ensured 99.9%+ availability of AWS EKS workloads in a distributed enterprise production environment
- Performed advanced Linux, Kubernetes, and network troubleshooting for production incidents (L2/L3 support)
- Reduced MTTR by ~30% through rapid incident triage, RCA, and automation-driven remediation
- Improved CI/CD pipeline reliability by ~40% using Jenkins and GitHub Actions optimization
- Defined and operationalized SLIs/SLOs for critical services, improving service health visibility and alerting accuracy
- Built automation using Python and Bash, reducing operational workload by ~80%
- Managed certificate lifecycle operations (Venafi) across EMEA, US, and India regions
- Enhanced monitoring and diagnostics using Splunk and Dynatrace, improving observability and incident detection
- Contributed to blameless postmortems and continuous service reliability improvements
- Worked in cross-functional global teams across time zones, supporting enterprise operations.

Senior Performance and Automation Engineer May 2024 – Nov 2024

Fidelity Investments, Dublin (Contract) - Sirius Technology

- Managed large-scale Kubernetes (EKS) production environments, including deployments, scaling, RBAC, and networking policies
- Implemented enterprise observability strategy using Prometheus, Grafana, and Datadog, improving issue detection by ~45%
- Built Terraform-based infrastructure automation for performance testing environments on AWS
- Developed CI/CD pipelines using Jenkins and JMeter for load and stress testing
- Performed production incident troubleshooting for performance degradation and system failures (L2/L3)
- Improved deployment stability and system resilience under high-load conditions.

Senior Cloud Engineer

April 2021- June 2022

Future Focus Infotech, India

- Supported migration of enterprise workloads to AWS EKS, improving scalability and operational standardization
- Managed Kubernetes clusters with RBAC, HPA, and ingress controllers
- Implemented monitoring and alerting using Prometheus and Grafana, improving system uptime
- Worked on CI/CD optimization using Jenkins, improving deployment success rate.

Senior Cloud Engineer

May 2020- Jan 2021

Softline Services, Project- Vodafone

- Provided L2/L3 production support for AWS Linux (EC2) environments, improving incident resolution time by ~35%.
- Performed Linux/Unix system troubleshooting, log analysis, and performance debugging.
- Managed IAM roles and enforced least privilege security controls.
- Supported Git-based CI/CD governance and deployment processes.
- Developed operational runbooks for production support teams.

Senior Cloud Engineer

Oct 2016- May 2020

HCL Technologies, India, Project - Rogers, Canada

- Managed high-priority production incidents using ITIL-based processes in enterprise environments
- Supported large-scale AWS infrastructure (EC2, RDS, VPC, S3) for performance and availability
- Implemented monitoring using CloudWatch, Prometheus, and Grafana, reducing reactive incidents by ~35%
- Configured network security, VPNs, firewall rules, and segmentation in enterprise environments.

EDUCATION

MSc Cloud Computing – National College of Ireland, Dublin | 2022–2023

B.E. Engineering – BKIT, India | 2012–2016

KEY PROJECTS

- Built a Kubernetes-based CI/CD platform using Terraform, Jenkins, and Helm.
https://github.com/nitukumarii/Terraform_EKS_Jenkns
 - Created S3 bucket , with full ownership and made it public accessible and created a static website hosted on s3
<https://github.com/nitukumarii/terraform-s3-website>
-
